

Lab. : Création Module Gestion des jurys

M.AITDAOUD MOHAMED

Rawane Khoumri
02/01/2026

Objectif du Lab

L'objectif de ce projet est de développer un module Odoo permettant la **gestion structurée des jurys et de leurs décisions**, afin d'optimiser le processus d'évaluation académique, d'améliorer la traçabilité des résultats et de centraliser les informations liées aux délibérations au sein d'un établissement d'enseignement.

- Ajouter un nouveau menu Gestion des jurys
- Gérer les enregistrements simples (Name, Academic Year, Session date, State)
- Afficher les données en liste et en formulaire

Installation Docker

Vérifier l'installation de docker sur **Git Bash** tapez :

```
docker --version
```

```
docker compose version
```

Odoo module structure

```
gestion_jurys/
├── __init__.py
├── __manifest__.py
└── models/
    ├── __init__.py
    ├── jury.py
    ├── jury_member.py
    └── jury_decision.py
└── views/
    ├── jury_views.xml
    ├── jury_member_views.xml
    └── jury_decision_views.xml
└── security/
    └── ir.model.access.csv
```

Création du projet Odoo Docker

Sur Bash taper :

```
mkdir odoo-jury-project
```

```
cd odoo-jury-project
```

- Ensuite la creation des fichiers addons et config :

```
mkdir addons
```

```
mkdir config
```

La création du module Odoo (Gestion des jurys)

- Placer vous dans addons :

```
cd addons
```

- créez le module du fichier :

```
mkdir gestion_jurys
```

```
cd gestion_jurys
```

```
odoo-docker/  
|   └── addons/  
|       └── gestion_jurys/
```

- Créez toute la base du module :

```
touch __init__.py
```

```
touch __manifest__.py
```

```
mkdir models views security
```

```
touch models/__init__.py
```

```
touch models/jury.py
```

```
touch models/jury_decision.py
```

```
touch views/jury_views.xml
```

```
touch views/jury_decision_views.xml
```

```
touch security/ir.model.access.csv
```

- Dans manifest.py ajouter le code suivant :

```
> {
>     'name': 'Gestion des Jurys',
>     'version': '1.0',
>     'summary': 'Gestion des jurys et décisions',
>     'category': 'Education',
>     'author': 'KHOUMRI Rawane',
>     'depends': ['base'],
>     'data': [
>         'security/ir.model.access.csv',
>         'views/jury_views.xml',
>     ],
>     'installable': True,
>     'application': True,
> }
```

- Ouvrir le fichier docker-compose.xml et vérifier s'il y a le code suivant :

```
> services:
>   db:
>     image: postgres:15
>     container_name: odoo_db
>     environment:
>       POSTGRES_DB: postgres
>       POSTGRES_USER: odoo
>       POSTGRES_PASSWORD: odoo
>     volumes:
>       - db_data:/var/lib/postgresql/data
>
>   odoo:
>     image: odoo:17.0
>     container_name: odoo_app
>     depends_on:
>       - db
>     ports:
>       - "8069:8069"
>     volumes:
>       - C:/Users/krawa/odoo-docker/addons:/mnt/extr-addons
>     environment:
>       - HOST=db
>       - USER=odoo
>       - PASSWORD=odoo
>
>   volumes:
>     db_data:
```

Dans models/__init__.py :

```
from . import jury  
from . import jury_decision
```

Jury model :

Dans models/jury.py

```
from odoo import models, fields  
  
class Jury(models.Model):  
    _name = 'gestion.jury'  
    _description = 'Jury'  
  
    name = fields.Char(string="Jury Name", required=True)  
    session_date = fields.Date(string="Session Date")  
    academic_year = fields.Char(string="Academic Year")  
    state = fields.Selection(  
        [('draft', 'Draft'), ('validated', 'Validated')],  
        default='draft'  
    )
```

Dans models/jury_decision.py

```
from odoo import models, fields  
  
class JuryDecision(models.Model):  
    _name = 'gestion.jury.decision'  
    _description = 'Décision du Jury'  
  
    name = fields.Char(string="Référence", required=True)  
    jury_id = fields.Many2one(  
        'gestion.jury',  
        string="Jury",  
        required=True,  
        ondelete='cascade'  
    )  
    decision = fields.Selection(  
        [  
            ('admis', 'Admis'),  
            ('ajourne', 'Ajourné'),  
            ('refuse', 'Refusé'),  
        ],  
        string="Décision",  
        required=True  
    )  
    commentaire = fields.Text(string="Commentaire")
```

Création des droits d'accés:

- Dans bash tapez:

```
touch security/ir.model.access.csv
```

- Puis le code de security/ir.model.access.csv dans VS code :

```
id,name,model_id:id,group_id:id,perm_read,perm_write,perm_create,perm_unlink  
access_gestion_jury,access_gestion_jury,model_gestion_jury,,1,1,1,1  
access_gestion_jury_decision,access_gestion_jury_decision,model_gestion_jury_decision,,1,1,1,1
```

Création des VUES

```
touch views/jury_views.xml
```

```
touch views/jury_decision_views.xml
```

Ensuite ajouter le code dans views/jury_decision_views.xml dans Vs code :

```
<odoo>  
  
<record id="view_jury_decision_tree" model="ir.ui.view">  
    <field name="name">gestion.jury.decision.tree</field>  
    <field name="model">gestion.jury.decision</field>  
    <field name="arch" type="xml">  
        <tree>  
            <field name="name"/>  
            <field name="jury_id"/>  
            <field name="decision"/>  
        </tree>  
    </field>  
</record>  
  
<record id="view_jury_decision_form" model="ir.ui.view">  
    <field name="name">gestion.jury.decision.form</field>  
    <field name="model">gestion.jury.decision</field>  
    <field name="arch" type="xml">  
        <form>  
            <sheet>  
                <group>  
                    <field name="name"/>  
                    <field name="jury_id"/>  
                    <field name="decision"/>  
                    <field name="commentaire"/>  
                </group>  
            </sheet>  
        </form>  
    </field>  
</record>
```

```
        </group>
    </sheet>
</form>
</field>
</record>

<record id="action_gestion_jury_decision" model="ir.actions.act_window">
    <field name="name">Décisions du Jury</field>
    <field name="res_model">gestion.jury.decision</field>
    <field name="view_mode">tree,form</field>
</record>

<menuitem id="menu_gestion_jury_decision"
          name="Décisions du Jury"
          parent="menu_gestion_jurys_root"
          action="action_gestion_jury_decision"/>

</odoo>
```

Et dans views/jury_decision_views.xml:

```
<ooodoo>

<!-- Liste des jurys -->
<record id="view_jury_tree" model="ir.ui.view">
    <field name="name">gestion.jury.tree</field>
    <field name="model">gestion.jury</field>
    <field name="arch" type="xml">
        <tree>
            <field name="name"/>
            <field name="academic_year"/>
            <field name="session_date"/>
            <field name="state"/>
        </tree>
    </field>
</record>

<!-- Formulaire jury -->
<record id="view_jury_form" model="ir.ui.view">
    <field name="name">gestion.jury.form</field>
    <field name="model">gestion.jury</field>
    <field name="arch" type="xml">
        <form>
            <sheets>
                <group>
                    <field name="name"/>
                    <field name="academic year"/>
                </group>
            </sheets>
        </form>
    </field>
</record>
```

```

        <field name="session_date"/>
        <field name="state"/>
    </group>
</sheet>
</form>
</field>
</record>

<!-- Action -->
<record id="action_gestion_jury" model="ir.actions.act_window">
    <field name="name">Jury</field>
    <field name="res_model">gestion.jury</field>
    <field name="view_mode">tree,form</field>
</record>

<!-- Menus -->
<menuitem id="menu_gestion_jurys_root"
          name="Gestion des Jurys"/>

<menuitem id="menu_gestion_jurys"
          name="Jury et décisions"
          parent="menu_gestion_jurys_root"
          action="action_gestion_jury"/>

</odoo>

```

N'oubliez pas d'enregistrer avec chaque code ajouter ou modifier.

Restart docker

docker compose restart

Puis dans le navigateur :

<http://localhost:8069>

➤ Active le **mode développeur** (si pas déjà fait)

Settings -> dévelloper tools

The screenshot shows the 'General Settings' section of a web application. At the top, there are buttons for 'Save' and 'Discard'. Below them is a search bar with placeholder text 'Search...'. The main area contains two sections: 'General Settings' and 'Developer Tools'. The 'General Settings' section has a note about enabling the profiling tool. The 'Developer Tools' section contains three options: 'Activate the developer mode', 'Activate the developer mode (with assets)', and 'Activate the developer mode (with tests assets)'. A sidebar on the left lists 'General Settings', 'Translations', and 'Technical'.

➤ Va dans :

- **Apps**
- Clique **Update Apps List**

The screenshot shows the 'Apps' page. At the top, there are buttons for 'Apps', 'Update Apps List', 'Apply Scheduled Upgrades', and 'Import Module'. The 'Update Apps List' button is highlighted.

- Cherche : **Gestion des Jurys**
- Clique **Install**

The screenshot shows the 'Gestion des Jurys' page. At the top, there are buttons for 'New', 'Jurys', and a gear icon. The page includes a search bar and a table with columns: 'Jury Name', 'Academic Year', 'Session Date', and 'State'. One row is visible: 'Rawane khoumri', '2025', '01/11/2026', and 'Validated'.

Jury Name	Academic Year	Session Date	State
Rawane khoumri	2025	01/11/2026	Validated

The screenshot shows the 'Gestion des Jurys' page with the 'New' tab selected. It displays a form with fields for 'Jury Name', 'Academic Year', 'Session Date', and 'State'. The 'State' field is currently set to 'Draft'.

Jury Name	<input type="text"/>
Academic Year	<input type="text"/>
Session Date	<input type="text"/>
State	Draft
